

FAILED CHARGE

Today you attempted to charge your hybrid/EV on a paid for 120kW Tesla supercharger, although Tesla have offered access to these chargers to any manufacturer willing to help with accelerating the world's transition to sustainable energy no 3rd party car company has agreed on a deal so sadly **these chargers won't work with any other cars including yours** and some car park operators will also fine and/or tow cars that block a charger like this.

Tesla Destination Chargers (a small silver charger) with a white sign like below are free for all EVs to use.

Please ensure your car is charging before leaving it.

Regards,
A concerned EV owner.
